extensive list of
Service Descriptions**

Service Description

Our electrical safety audit is accomplished in a logical series of steps starting at your plant or facility.

1. Our audit team performs a series of on-site interviews with operations, maintenance, and safety personnel to determine the existence and availability of procedures, documentation, safety training, safety equipment, and other such critical safety-related items.
2. Management and employee questionnaires are administered for later statistical and graphical analysis.
3. A physical walk-through is performed to inspect all system electrical equipment. This walk-through is documented with digital photographs.
4. The visit is completed in an exit meeting at which time we provide an overview of our findings including any life threatening hazards or code violations. The presentation is accompanied with audio-visual documentation.

After the site visit, our auditors produce a detailed, comprehensive report which documents all of our findings and includes our recommendations for improving or enhancing your electrical-safety program. If desired, our audit team can arrange an on-site presentation of the final report.
